

The goal

To tell the story of MILES and help researchers identify common knowledge gaps, new hypotheses, and new opportunities for collaboration.

What information is being collected?

We want to know about your research questions, what data you plan to use to answer those questions, and ultimately what publications result from your research. We also want to know a bit about you, such as your supervisor's name and when you started with MILES.

It's that simple.

The Data Map

Northwest Knowledge Network

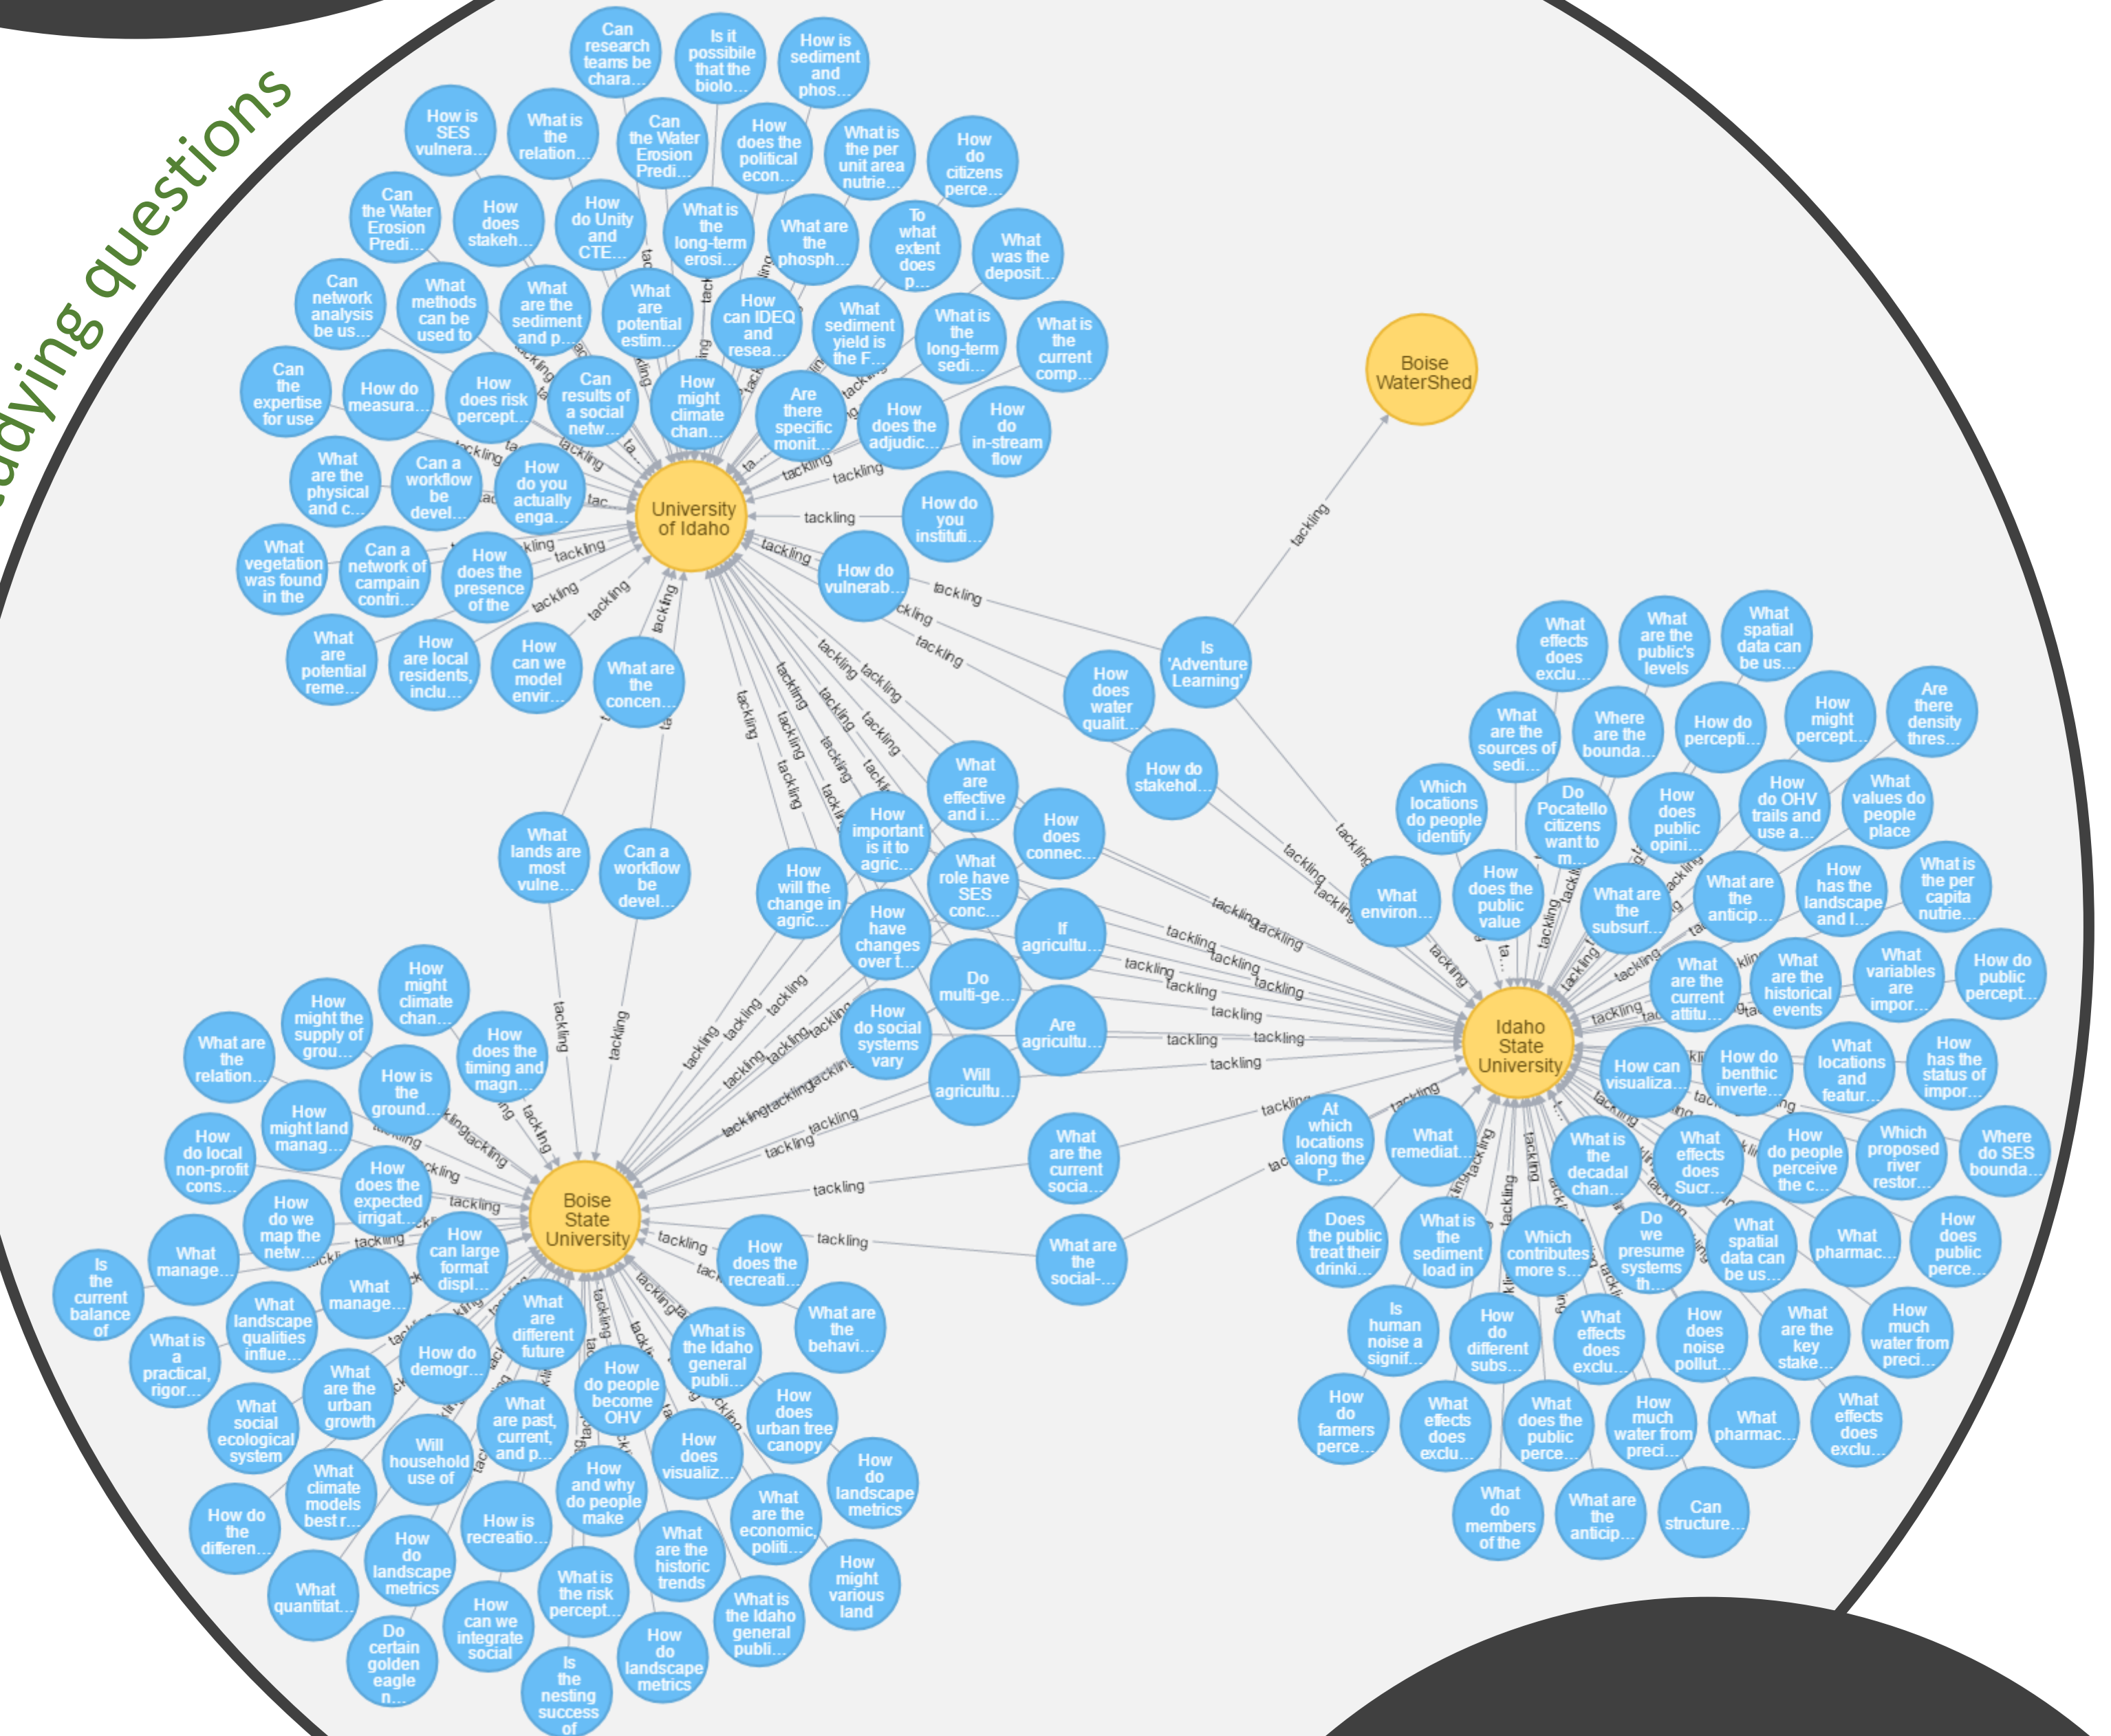

Data authored by YOU and stored in repositories

What is the data map?

The data map is both a database and a visualization tool. Using graph theory and social network analysis, we interrelate the datasets collected within the MILES program to the social-ecological system (SES) questions that those data help inform.

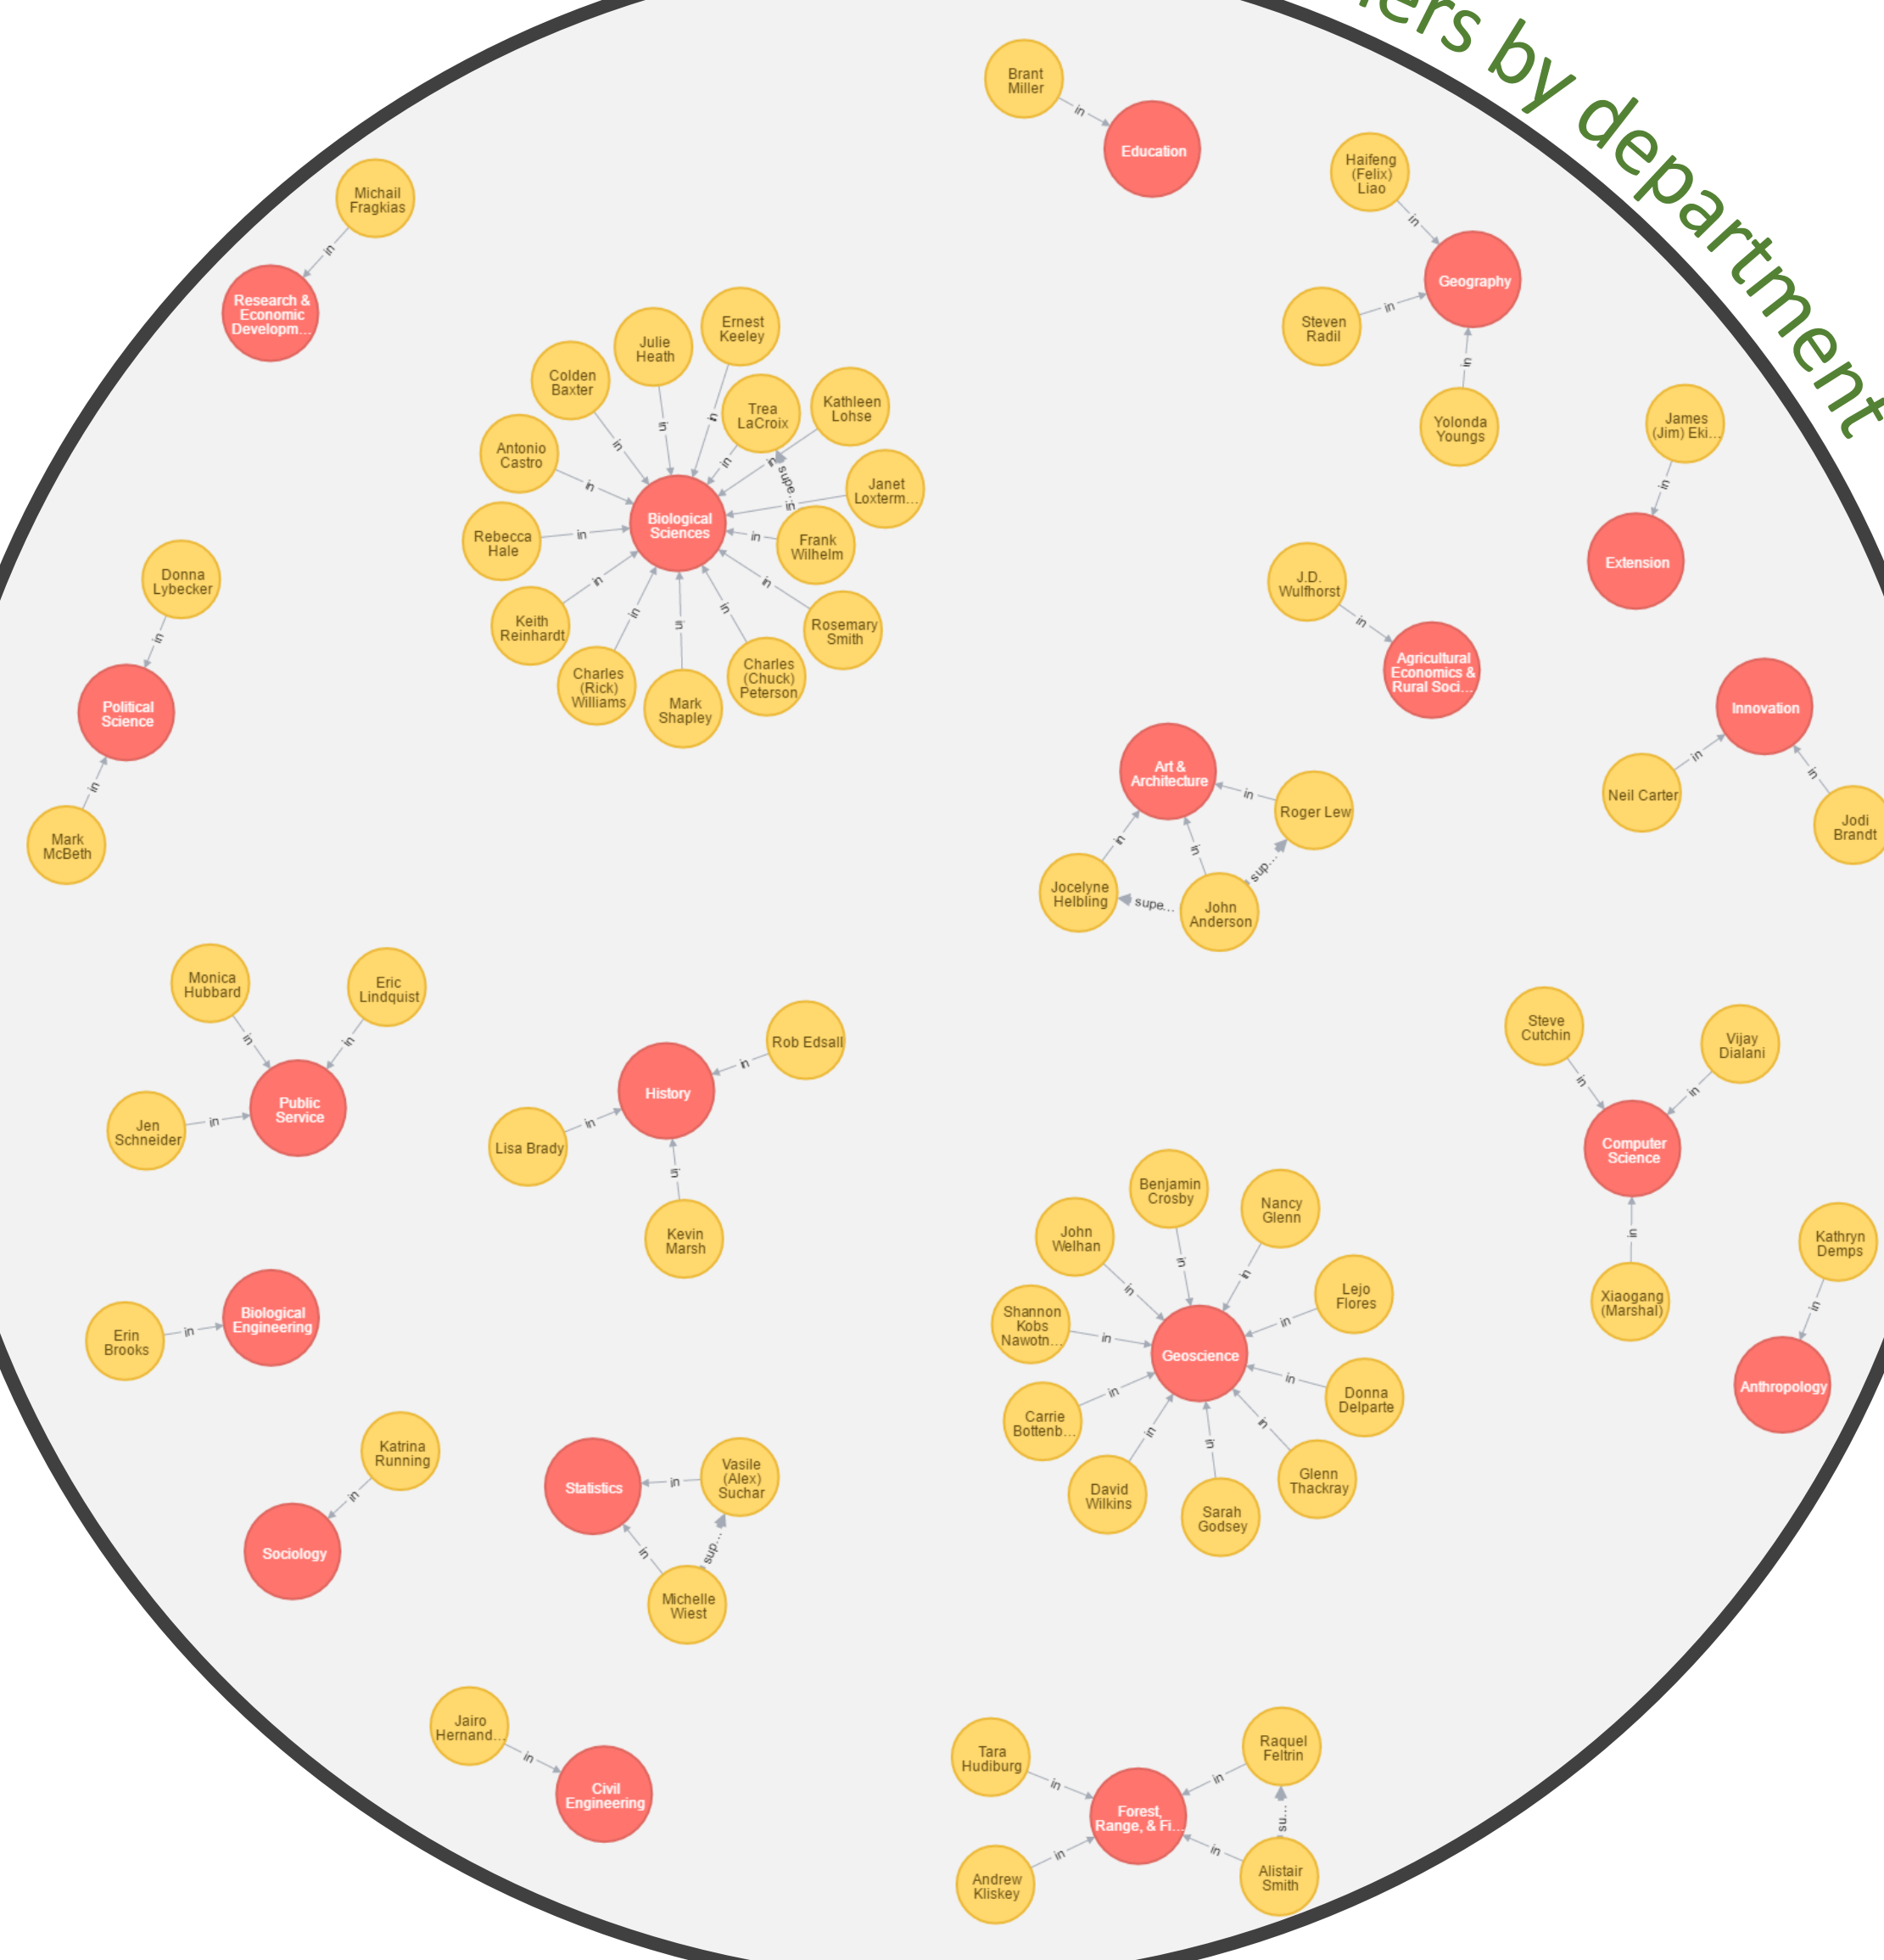

Universities studying questions

Contribute

To add your research to the data map, contact the MILES data manager. The interview should take between 5 and 15 minutes, depending on the extent of your involvement with MILES research.

Current researchers by department

What's in it for me?

Find collaborators, discover data, explore connections, or use it as a tool to communicate SES science in your community.

To learn more, contact the MILES data manager.
